

M CHR-70 till-2 70

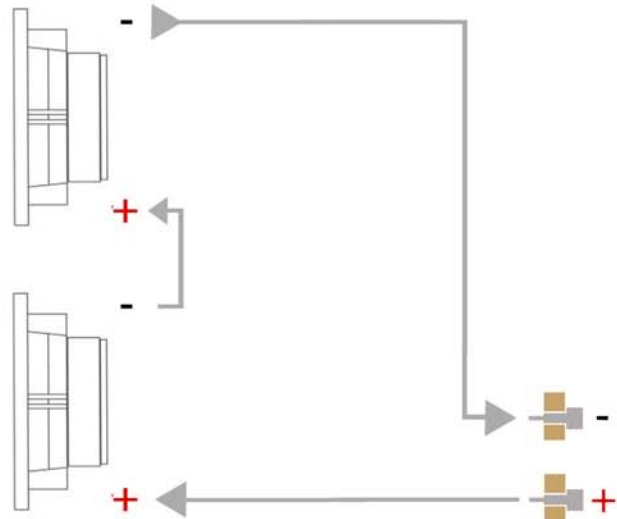

An economical 10 litre bass reflex bookshelf design using 2 x Markaudio's CHR-70 full range drivers. Wired in series, this design is good for handling more power.

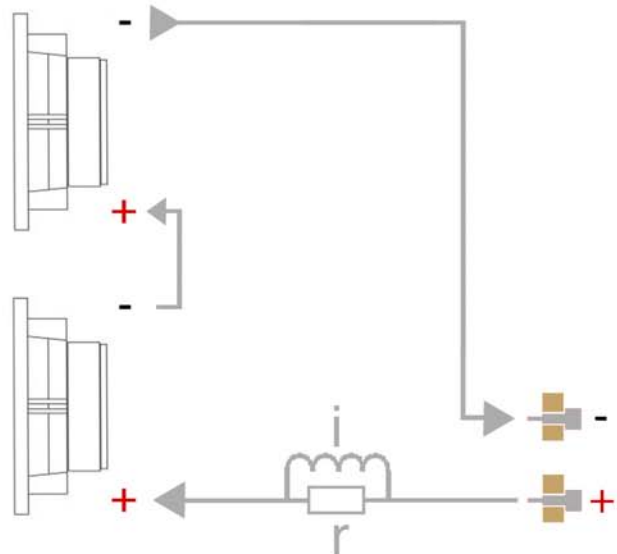

- Use 12mm MDF or marine ply (or thicker material if you want a very solid build)
- Add 15mm or thicker sound damping material to get your sound you like.
- Try adding a simple filter, experiment by starting with a 0.50-mH inductor and 10W 4Ohm resistor.
- Add 2 ports, 25mm diameter x 55mm long. Gives a frequency of 62 Hz, F3 cut off 57Hz (-3db)

Have Fun!

Wired in series
with no filter

Wired in series
with filter
i = inductor
r = resistor
